

EXERCISE 7: SPRINT REVIEW & RETROSPECTIVE

Aim

To conduct sprint review and retrospective meetings to evaluate project progress, gather feedback, and improve future development processes.

Tools Used

- GitHub
- Python
- Presentation Slides

69. Sprint Review Preparation

The demo environment was prepared to present the working system. The project repository, source code, and implementation outputs were made ready for demonstration.

70. Demo Agenda Creation

A structured demo agenda was prepared for presenting the system.

The agenda includes:

- Project overview
- Features implemented
- System demonstration
- Output results
- Conclusion

71. Sprint Review Meeting

A sprint review meeting was conducted to demonstrate the developed system.

The working software was presented, including:

- Credit card processing system
- Fraud detection logic
- Transaction outputs

72. Feedback Collection

Feedback was collected regarding system functionality and performance.

Suggestions included:

- Improving fraud detection logic
- Enhancing user interface
- Adding database support

73. Metrics Presentation

Basic sprint metrics were presented to evaluate progress.

Metrics include:

- Number of user stories completed
- Development progress
- System functionality status

74. Retrospective Meeting

A retrospective meeting was conducted to analyze team performance.

The **Starfish model** was used:

- Start → New improvements
- Stop → Ineffective practices
- Continue → Good practices
- More → Increase efforts
- Less → Reduce unnecessary work

75. Action Problems Documentation

Improvement actions were identified:

- Improve testing
- Enhance system design
- Optimize performance

76. Action Plan Creation

An action plan was created with responsibilities and timelines.

Tasks were assigned to team members to improve system quality in future iterations.

Figure 7.1: Sprint Review Workflow

Description: This diagram shows the sprint review process including demo and feedback collection.

Figure 7.2: Retrospective (Starfish Model)

Description: This diagram represents the Starfish model used for retrospective analysis.

Result

Successfully conducted sprint review and retrospective to evaluate system performance and identify improvements for future development.
