

EXERCISE 8: FINAL DELIVERY & DOCUMENTATION

Aim

To prepare final project deliverables including documentation, user manuals, deployment steps, and project closure reports.

Tools Used

- GitHub
- Python
- Google Colab / VS Code

77. Final Release Preparation

All features of the system were completed and tested successfully. The system was verified to ensure proper functioning of payment processing and fraud detection.

78. Release Notes Creation

Release Notes include:

- Version: 1.0
- Features:
 - Credit card payment processing
 - Fraud detection system
 - Transaction ID generation
- Bug Fixes:
 - Minor input validation issues resolved

79. Deployment Package Creation

The system was prepared for deployment by organizing source code and required files.

80. Deployment Steps Documentation

The system can be deployed using the following steps:

1. Install Python
2. Open the project in VS Code or Google Colab
3. Run the main program
4. Enter transaction amount
5. View output

81. User Manual Creation

The user manual provides instructions for system usage:

- Run the program
- Select payment option

- Enter amount
- View transaction result

82. Admin Guide Creation

The admin guide includes system monitoring and control:

- Monitor transactions
- Identify fraud cases
- Review system outputs

83. API Documentation

The system includes basic functional modules such as payment processing and fraud detection.

84. Architecture Document Creation

The system follows a simple architecture:

Input → Processing → Output

Figure 8.1: System Architecture

Description: This diagram shows the overall system architecture.

85. Setup Guide Creation

Steps to set up the system:

- Install Python
- Open project files
- Run the main program

86. Maintenance Procedures Documentation

Maintenance activities include:

- Updating code
- Fixing bugs
- Improving system features

87. Final Project Report

The final report includes all project details such as SRS, design, implementation, and testing.

88. Lessons Learned Document

Key learnings:

- Agile methodology
- Version control using GitHub
- Basic implementation of fraud detection

89. Team Performance Evaluation

The team worked collaboratively to complete all project tasks successfully.

90. System Deployment

The system was successfully executed in a local environment.

91. Source Code Organization

The complete source code was organized in a GitHub repository with proper structure.

92. Project Closure Report

The project was completed successfully with all objectives achieved.

93. Team Reflection Document

The project provided valuable experience in software development and teamwork.

Result

Successfully completed final delivery and documentation of the Credit Card Processing System project.
